

# ESCON2 Feature Chart

The ESCON2 line of products from maxon are small-sized, powerful 4-quadrant PWM servo controllers. Their high power density allows flexible use for brushed DC motors and brushless EC (BLDC) motors up to approximately 1'800 Watts with various feedback options, such as Hall sensors, incremental encoders as well as absolute sensors in a multitude of drive applications. The devices are specially designed to be commanded and controlled by analog and digital set values, as well as a slave node in a CANopen network. Additionally, the units can be operated via any USB or RS232 communication port of a Windows or Linux workstation. They also feature extensive analog and digital I/O functionality. Latest technology, such as field-oriented control (FOC), acceleration/velocity feed forward, in combination with highest control cycle rates allow sophisticated, ease-of-use motion control. The completely free Graphic User Interface «Motion Studio» enables convenient configuration, quick monitoring and diagnostics, and automated tuning of all drive systems.
