READ THIS FIRST

These instructions are intended for qualified technical personnel. Prior commencing with any activities...

- you must carefully read and understand this manual and
- you must follow the instructions given therein.

EPOS4 Module 50/5 and EPOS4 Compact 50/5 positioning controllers are considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and are intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Therefore, you must not put the device into service,...

- unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- unless the other machinery fulfills all relevant health and safety aspects!
- unless all respective interfaces have been established and fulfill the herein stated requirements!

1 About

1.1 About this Document

1.1.1 Intended Purpose

Use the document to...

–stay safe,
–be fast,
–end up with set
up and ready-to-go
equipment.

The purpose of the present document is to familiarize you with the EPOS4 Module 50/5 and EPOS4 Compact 50/5 positioning controllers. It will highlight the tasks for safe and adequate installation and/or commissioning. Follow the described instructions ...

- to avoid dangerous situations,
- to keep installation and/or commissioning time at a minimum,
- to increase reliability and service life of the described equipment.

The present document is part of a documentation set and contains performance data and specifications, information on fulfilled standards, details on connections and pin assignment, and wiring examples. The below overview shows the documentation hierarchy and the interrelationship of its individual parts:

Figure 1-1 Documentation structure

1.1.2 Target Audience

The present document is intended for trained and skilled personnel. It conveys information on how to understand and fulfill the respective work and duties.

1.1.3 How to use

If not stated otherwise, the described details are valid for both the plug-in module and the stand-alone compact version (→ chapter “1.2 About the Devices” on page 1-8).

Throughout the document, the following notations and codes will be used.

Notation	Meaning
(n)	refers to an item (such as part numbers, list items, etc.)
→	denotes “see”, “see also”, “take note of” or “go to”

Table 1-1 Notation used

1.1.4 Symbols & Signs

In the course of the present document, the following symbols and signs will be used.

Type	Symbol	Meaning	
Safety alert	 (typical)	DANGER	Indicates an imminent hazardous situation . If not avoided, it will result in death or serious injury .
		WARNING	Indicates a potential hazardous situation . If not avoided, it can result in death or serious injury .
		CAUTION	Indicates a probable hazardous situation or calls the attention to unsafe practices. If not avoided, it may result in injury .
Prohibited action	 (typical)	Indicates a dangerous action. Hence, you must not!	
Mandatory action	 (typical)	Indicates a mandatory action. Hence, you must!	
Information		Requirement / Note / Remark	Indicates an activity you must perform prior continuing, or gives information on a particular item you need to observe.
		Best practice	Indicates an advice or recommendation on the easiest and best way to further proceed.
		Material Damage	Indicates information particular to possible damage of the equipment.

Table 1-2 Symbols and signs

1.1.5 Trademarks and Brand Names

For easier legibility, registered brand names are listed below and will not be further tagged with their respective trademark. It must be understood that the brands (the list below is not necessarily concluding) are protected by copyright and/or other intellectual property rights even if their legal trademarks are omitted in the later course of this document.

Brand Name	Trademark Owner
Adobe® Reader®	© Adobe Systems Incorporated, USA-San Jose, CA
BiSS	© iC-Haus GmbH, DE-Bodenheim
CANopen® CiA®	© CiA CAN in Automation e.V, DE-Nuremberg
CLIK-Mate™ Micro-Fit™ Mini-Fit Jr.™ Mega-Fit®	© Molex, USA-Lisle, IL
EnDat	© DR. JOHANNES HEIDENHAIN GmbH, DE-Traunreut
EtherCAT®	© EtherCAT Technology Group, DE-Nuremberg, licensed by Beckhoff Automation GmbH, DE-Verl
har-flexicon®	© HARTING AG & Co. KG, DE-Espelkamp
Linux®	© Linus Torvalds (The Linux Foundation, USA-San Francisco CA)
Littelfuse® SMD NANO2®	© Littelfuse Inc., USA-Chicago, IL
Windows®	© Microsoft Corporation, USA-Redmond, WA

1.2 About the Devices

Capabilities of the device, included features, and supported motors.

maxon motor control's EPOS4 Module 50/5 and EPOS4 Compact 50/5 are small-sized, full digital, smart positioning control units. Their high power density allow flexible use for brushed DC and brushless EC (BLDC) motors up to approximately 250 Watts with various feedback options, such as Hall sensors, incremental encoders as well as absolute sensors in a multitude of drive applications.

The devices are specially designed to be commanded and controlled as a slave node in a CANopen network. In addition, the units can be operated via any USB or RS232 (the Module requires an external transceiver) communication port of a Windows or Linux workstation. Moreover, the integrated extension interface allows pooling with optionally available communication interfaces, such as EtherCAT or other additional functionalities.

Latest technology, such as field-oriented control (FOC) and acceleration/velocity feed forward in combination with highest control cycle rates allow sophisticated, ease-of-use motion control.

Thanks to its smart design, the EPOS4 Module 50/5 can either be used in combination with EPOS4 CB 50/5 connector boards as a compact, integrated solution or be incorporated into customer-specific motherboards for single axis or multi axes motion control systems. The controller is available in the following configurations:

- **EPOS4 Module 50/5 (534130)**
Plug-in module for use with maxon motor control EPOS4 connector boards or customer-specific motherboards
- **EPOS4 CB 50/5 CAN (534133)**
Connector board for initial commissioning or combination to a compact solution providing all connectors, including CANopen interface
- **EPOS4 Compact 50/5 CAN (541718)**
Fully integrated, compact, ready-to-use assembly of plug-in module and CANopen connector board

Figure 1-2 Configuration overview

For easier legibility, in the later course of this document naming of components will be as follows:

- EPOS4 Module 50/5 will be named as «**Module**»
- EPOS4 Compact 50/5 will be named as «**Compact**» covering all Compact versions
- EPOS4 Compact 50/5 CAN will be named as «**Compact CAN**»
- «**EPOS4**» will be used to describe both versions, Module and Compact and/or other EPOS4 positioning controllers as a whole

Find the latest edition of the present document as well as additional documentation and software for EPOS4 positioning controllers also on the Internet: →<http://epos.maxonmotor.com>.

1.3 About the Safety Precautions

Keep in mind:

Safety first! Always!

- Make sure that you have read and understood the note “READ THIS FIRST” on page A-2!
- Do not engage with any work unless you possess the stated skills (→chapter “1.1.2 Target Audience” on page 1-5)!
- Refer to →chapter “1.1.4 Symbols & Signs” on page 1-6 to understand the subsequently used indicators!
- You must observe any regulation applicable in the country and/or at the site of implementation with regard to health and safety/accident prevention and/or environmental protection!

DANGER

High voltage and/or electrical shock

Touching live wires causes death or serious injuries!

- Consider any power cable as connected to live power, unless having proven the opposite!
- Make sure that neither end of cable is connected to live power!
- Make sure that power source cannot be engaged while work is in process!
- Obey lock-out/tag-out procedures!
- Make sure to securely lock any power engaging equipment against unintentional engagement and tag it with your name!

Requirements

- Make sure that all associated devices and components are installed according to local regulations.
- Be aware that, by principle, an electronic apparatus can not be considered fail-safe. Therefore, you must make sure that any machine/apparatus has been fitted with independent monitoring and safety equipment. If the machine/apparatus should break down, if it is operated incorrectly, if the control unit breaks down or if the cables break or get disconnected, etc., the complete drive system must return – and be kept – in a safe operating mode.
- Be aware that you are not entitled to perform any repair on components supplied by maxon motor.

Electrostatic sensitive device (ESD)

- Wear working cloth and use equipment in compliance with ESD protective measures.
- Handle device with extra care.

••page intentionally left blank••

2 Specifications

2.1 Technical Data

EPOS4 Module 50/5 (534130) EPOS4 Compact 50/5 CAN (541718)				
Electrical Rating	Nominal power supply voltage +V _{CC}	10...50 VDC		
	Nominal logic supply voltage +V _C	Module	10...50 VDC	
		Compact	10...50 VDC, optional	
	Absolute supply voltage +V _{min} / +V _{max}	8 VDC / 56 VDC		
	Output voltage (max.)	0.9 x +V _{CC}		
	Output current I _{cont} / I _{max} (<3 s)	5 A / 15 A		
	Pulse Width Modulation frequency	50 kHz		
	Sampling rate PI current controller	25 kHz (40 μs)		
	Sampling rate PID speed controller	2.5 kHz (400 μs)		
	Sampling rate PID positioning controller	2.5 kHz (400 μs)		
	Max. efficiency	97% (→Figure 2-4)		
	Max. speed DC motor	limited by max. permissible speed (motor) and max. output voltage (controller)		
	Max. speed EC motor (block)	100'000 rpm (1 pole pair)		
	Max. speed EC motor (sinusoidal)	50'000 rpm (1 pole pair)		
Built-in motor choke	Module	—		
	Compact	3 x 9.4 μH; 5 A		
Inputs & Outputs	Digital Input 1 (general purpose)	Module	+2.1...+36 VDC	
	Digital Input 2 (general purpose)	Compact	DIP switch-selectable levels: • Logic: +2.0...+30 VDC • PLC: +9.0...+30 VDC	
	Digital Input 3 (general purpose)			
	Digital Input 4 (general purpose)			
	Digital Output 1 (general purpose)	max. 36 VDC / I _L ≤500 mA		
	Digital Output 2 (general purpose)	(open collector with internal pull-up)		
	STO Input 1	+4.5...+30 VDC (optically isolated)		
	STO Input 2			
	STO Output	max. 30 VDC / I _L ≤15 mA (optically isolated with self-resetting short-circuit protection)		
Analog Input 1	Resolution 12-bit, −10...+10 V, 10 kHz, differential			
Analog Input 2				
Analog Output 1	Resolution 12-bit, −4...+4 V, 25 kHz, referenced to GND			
Analog Output 2				
Digital Hall sensor signals H1, H2, H3	+2.0...+24 VDC (internal pull-up)			

Continued on next page.

EPOS4 Module 50/5 (534130) EPOS4 Compact 50/5 CAN (541718)			
Inputs & Outputs (continued)	Digital incremental encoder signals A, A\, B, B\, I, I\	EIA RS422, max. 6.25 MHz	
	Sensor signals (choice between multiple functions) • Digital incremental encoder • Analog incremental encoder* • SSI absolute encoder • High-speed digital input 1...4 and High-speed digital output 1	3-channel, EIA RS422, max. 6.25 MHz 3-channel, resolution 12-bit, ± 1.8 V, differential configurable, EIA RS422, 5 MHz EIA RS422, max. 6.25 MHz EIA RS422, max. 6.25 MHz	
Voltage Outputs	Sensor supply voltage V_{Sensor}	+5 VDC / $I_L \leq 100$ mA	
	Auxiliary output voltage V_{Aux}	+5 VDC / $I_L \leq 150$ mA	
Motor Connections	DC motor	+ Motor, – Motor	
	EC motor	Motor winding 1, Motor winding 2, Motor winding 3	
Interfaces	RS232	Module	max. 115'200 bit/s; external transceiver necessary
		Compact	max. 115'200 bit/s
	USB 2.0 / USB 3.0	Full Speed	
	CAN	max. 1 Mbit/s	
Status Indicators	Operation	green LED	
	Error	red LED	
Physical	Weight	Module	approx. 17 g
		Compact CAN	approx. 58 g
	Dimensions (L x W x H)	Module	53.8 x 38.8 x 11.1 mm
		Compact CAN	55.0 x 40.0 x 31.1 mm
	Mounting	Module	pluggable female box headers 1.27 mm or mounting holes for M2.5 screws
		Compact	mounting holes for M2.5 screws ³⁾
Environmental Conditions	Temperature	Operation	Module: $-30 \dots +45$ °C Compact: $-30 \dots +25$ °C
		Extended range ¹⁾	Module: $+45 \dots +75$ °C Derating -0.167 A/°C (→ Figure 2-3) Compact: $+25 \dots +70$ °C Derating -0.111 A/°C (→ Figure 2-3)
		Storage	$-40 \dots +85$ °C
	Altitude ²⁾	Operation	0...6'000 m MSL
		Extended range ¹⁾	6'000...10'000 m MSL Derating → Figure 2-3
	Humidity	5...90% (condensation not permitted)	

* Available with an upcoming firmware release.

- 1) Operation within the extended range (temperature and altitude) is permitted. However, a respective derating (declination of output current I_{cont}) as to the stated values will apply.
- 2) Operating altitude in meters above Mean Sea Level, MSL.
- 3) Max. tightening torque 0.16 Nm.

Figure 2-7 EPOS4 Compact 50/5 CAN – Dimensional drawing [mm]

2.5 Standards

The described device has been successfully tested for compliance with the below listed standards. In practical terms, only the complete system (the fully operational equipment comprising all individual components, such as motor, servo controller, power supply unit, EMC filter, cabling etc.) can undergo an EMC test to ensure interference-free operation.

Important Notice

The device's compliance with the mentioned standards does not imply its compliance within the final, ready to operate setup. In order to achieve compliance of your operational system, you must perform EMC testing of the involved equipment as a whole.

Electromagnetic Compatibility		
Generic	IEC/EN 61000-6-2	Immunity for industrial environments
	IEC/EN 61000-6-3	Emission standard for residential, commercial and light-industrial environments
Applied	IEC/EN 55022 (CISPR22)	Radio disturbance characteristics / radio interference
	IEC/EN 61000-4-3	Radiated, radio-frequency, electromagnetic field immunity test >10 V/m
	IEC/EN 61000-4-4	Electrical fast transient/burst immunity test ± 2 kV
	IEC/EN 61000-4-6	Immunity to conducted disturbances, induced by radio-frequency fields 10 Vrms

Others		
Environment	IEC/EN 60068-2-6	Environmental testing – Test Fc: Vibration (sinusoidal, 10...500 Hz, 20 m/s ²)
	MIL-STD-810F	Random transport (10...500 Hz up to 2.53 g _{rms})
Safety	UL File Number	Unassembled printed circuit board • Module: E207844 • Compact CAN: E207844
Reliability	MIL-HDBK-217F	Reliability prediction of electronic equipment Environment: Ground, benign (GB) Ambient temperature: 298 K (25 °C) Component stress: In accordance with circuit diagram and nominal power Mean Time Between Failures (MTBF) • Module: 314'822 hours • Compact CAN: 253'865 hours

Table 2-6 Standards

3 Setup

IMPORTANT NOTICE: PREREQUISITES FOR PERMISSION TO COMMENCE INSTALLATION

EPOS4 Module 50/5 and EPOS4 Compact 50/5 positioning controllers are considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and **are intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.**

**WARNING****Risk of injury**

Operating the device without the full compliance of the surrounding system with the EU Directive 2006/42/EC may cause serious injuries!

- Do not operate the device, unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- Do not operate the device, unless the other machinery fulfills all relevant health and safety aspects!
- Do not operate the device, unless all respective interfaces have been established and fulfill the requirements stated in this document!

3.1 Generally applicable Rules

**Maximal permitted supply voltage**

- Make sure that supply power is between 10...50 VDC.
- Supply voltages above 56 VDC, or wrong polarity will destroy the unit.
- Note that the necessary output current is depending on the load torque. Yet, the output current limits are as follows:
 - continuous max. 5 A
 - short-time (acceleration) max. 15 A

**Hot plugging the USB interface may cause hardware damage**

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

3.2 Pin Assignment for Module Version

For in-depth details on connections → chapter “3.4 Connection Specifications” on page 3-38.

Figure 3-8 Pin assignment

Pin	Signal	Description

Table 3-8 Pin assignment B1...B46 (X6...X12)

3.3 Pin Assignment for Connector Boards & Compact Versions

As an alternative to developing an own motherboard, ready-made connector boards are available to combine the Module to Compact versions. They comprise all required connections.
For in-depth details on connections → chapter “3.4 Connection Specifications” on page 3-38.

3.3.1 EPOS4 CB 50/5 CAN (534133) / EPOS4 Compact 50/5 CAN (541718)

Figure 3-9 EPOS4 CB 50/5 CAN (left) / EPOS4 Compact 50/5 CAN (right)

3.3.2 Cabling

PLUG&PLAY

Take advantage of maxon’s prefab cable assemblies. They come as ready-to-use parts and will help to reduce commissioning time to a minimum.

- Check the following table and find the part number of the cable assembly that matches the setup you will be using.
- Follow the cross-reference to get the cable’s pin assignment.

Connector	Prefab Cable Assembly		
	Designation	Part Number	→Page
X3	Motor Cable	275851	3-25
X4	Hall Sensor Cable	275878	3-26
X5	Encoder Cable	275934	3-27
X6	Sensor Cable 5x2core	520852	3-29
X7	Signal Cable 8core	520853	3-30
X8	Signal Cable 7core	520854	3-31
X9	Signal Cable 8core	520853	3-30
X10	RS232-COM Cable	520856	3-33
X11	CAN-COM Cable	520857	3-34
	CAN-CAN Cable	520858	3-34
X12	CAN-COM Cable	520857	3-34
	CAN-CAN Cable	520858	3-34
X13	USB Type A - micro B Cable (located at the Module)	403968	3-68

Table 3-9 Prefab maxon cables

MAKE&BAKE YOUR OWN

If you decide not to employ maxon motor's prefab cable assemblies, you might wish to use the prepackaged kit that contains all connectors required to make up your own cabling.

EPOS4 Connector Set (520859)		
Connector	Specification	Quantity

Tool	Manufacturer	Part Number
Hand crimper for CLIK-Mate crimp terminals	Molex	63819-4600
Hand crimper for Micro-Fit 3.0 crimp terminals	Molex	63819-0000
Hand crimper for Mini-Fit crimp terminals	Molex	63819-0900

Table 3-11 Recommended tools

3.3.4 Connections

The USB interface (X13) is located at the Module.

Figure 3-10 EPOS4 CB 50/5 CAN – Connectors

How to read pin assignment tables

- The first column describes both the pin number of the connector and of the matching prefab maxon cable's Head A.
- The second column describes the cable core color of the prefab maxon cable.
- The third column describes the pin number of the prefab maxon cable's Head B.

3.3.4.1 Power & Logic Supply (X1/X2)

Best practice

Keep the motor mechanically disconnected during the setup and adjustment phase.

Figure 3-11 Power & logic supply connector X1/X2

X1/X2 Head A Pin	Prefab Cable Color	Head B Pin	Signal	Description
1		–	GND	Ground
2		+	+V _{CC}	Nominal power supply voltage (+10...+50 VDC)
3		+	+V _C	Nominal logic supply voltage (+10...+50 VDC)

Table 3-12 Power & logic supply connector X1/X2 – Pin assignment

Power & Logic Supply Connector X1/X2 (590736)		
Type	Spring-loaded contacts, 3 poles, pitch 2.54 mm	
Suitable plug	Harting har-flexicon 2.54 FPV-3 BK (14 31 031 3101 000) —included with every Compact version delivery—	
Suitable cables	Rigid	0.14...0.5 mm ² , AWG 26-20 / wire stripping length 6 mm
	Flexible	0.2...0.5 mm ² , AWG 24-20 / wire stripping length 6 mm 0.25...0.34 mm ² , AWG 24-22 / wire stripping length 6 mm, wire end sleeves
Suitable tools	Miniature screwdriver, size “00”

Table 3-34 CAN-CAN Cable

3.3.5 DIP Switch Configuration (SW1)

SW1

Figure 3-21 EPOS4 CB 50/5 CAN – DIP switch SW1

3.3.5.1 CAN ID (Node Address)

The CAN ID is set with DIP switches 1...5. The node address (1...31) may be coded using binary code.

Setting the CAN ID by DIP switch SW1

- By setting the DIP switch (1...5) address 0 ("OFF"), the CAN ID may be set by software (changing object "Node ID", range 1...127).
- The CAN ID results in the summed values of DIP switch addresses 1 ("ON").
- DIP switches 6...8 do not have any impact on the CAN ID.

Switch	Binary Code	Valence	Setting
1	2^0	1	
2	2^1	2	
3	2^2	4	
4	2^3	8	
5	2^4	16	

Table 3-35 DIP switch SW1 – Binary code values

Continued on next page.

The set CAN ID (node address) can be observed by adding the valence of all activated switches. Use the following table as a (non-concluding) guide:

Setting	Switch					Node Address
	1	2	3	4	5	
 ON OFF	0	0	0	0	0	–
 ON OFF	1	0	0	0	0	1
 ON OFF	0	1	0	0	0	2
 ON OFF	0	0	1	0	0	4
 ON OFF	1	0	1	0	0	5
 ON OFF	0	0	0	1	0	8
 ON OFF	0	0	0	0	1	16
 ON OFF	1	1	1	1	1	31
0 = Switch “OFF” 1 = Switch “ON”						

Table 3-36 DIP switch SW1 – Examples

3.3.5.2 CAN automatic Bit Rate Detection

Switch	OFF	ON
6	 ON OFF Automatic bit rate detection deactivated	 ON OFF Automatic bit rate detection activated (factory setting)

Table 3-37 DIP switch SW1 – CAN automatic bit rate detection

3.3.5.3 CAN Bus Termination

Switch	OFF	ON
7	 Without bus termination (factory setting)	 Bus termination with 120 Ω

Table 3-38 DIP switch SW1 – CAN bus termination

3.3.5.4 Digital Input Level

For details → chapter “3.4.7 Digital I/Os” on page 3-55.

Switch	OFF	ON
8	 Logic level (factory setting)	 PLC level

Table 3-39 DIP switch SW1 – Digital input level

3.3.6 Spare Parts

Order number	Description
520860	STO Idle Connector X9
590736	Power & Logic Supply Connector X1/X2

Table 3-40 Spare parts list

3.4 Connection Specifications

The actual connection will depend on the overall configuration of your drive system and the type of motor you will be using. Follow the description in given order and choose the wiring diagram (→ as of page 5-79) that best suits the components you are using.

How to read the following data

The following tables feature, where applicable, connection details for both versions the Module and the Compact. Thereby,...

- the column «Module Header Pin» refers to the header's pin number.
Example: **A23...A29** means header A, pins 23 thru 29
- the column «Compact/CB Connector Pin» refers to the connector's pin number.
Example: **X1/X2 | 2** means connector X1/X2, pin 2

For easier legibility, the subsequently used circuit diagrams refer to the Module. For the corresponding Compact's circuitry take the second column «Compact/CB Connector Pin» into account.

3.4.1 Power Supply

Basically, any power supply may be used provided that it meets the below stated minimum requirements.

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A23...A29**	X1/X2 2	+V _{CC}	Nominal power supply voltage (+10...+50 VDC)
A30...A36**	X1/X2 1	GND	Ground
** Connect all pins in respect to the individual pin current rating.			

Table 3-41 Power supply – Pin assignment

Power supply requirements	
Output voltage	+V _{CC} 10...50 VDC
Absolute output voltage	min. 8 VDC; max. 56 VDC
Output current	Depending on load - continuous max. 5 A - short-time (acceleration, <3 s) max. 15 A

- Use the formula below to calculate the required voltage under load.
- Choose a power supply according to the calculated voltage. Thereby consider:
 - During braking of the load, the power supply must be capable of buffering the recovered kinetic energy (for example, in a capacitor).
 - If you are using an electronically stabilized power supply, make sure that the overcurrent protection circuit is configured inoperative within the operating range.

Continued on next page.

The formula already takes the following into account:

- Maximum PWM duty cycle of 90%
- Controller's max. voltage drop of 1 V @ 5 A

KNOWN VALUES:

- Operating torque M [mNm]
- Operating speed n [rpm]
- Nominal motor voltage U_N [Volt]
- Motor no-load speed at U_N ; n_O [rpm]
- Speed/torque gradient of the motor $\Delta n/\Delta M$ [rpm/mNm]

SOUGHT VALUE:

- Supply voltage $+V_{CC}$ [Volt]

SOLUTION:

$$V_{CC} \geq \left[\frac{U_N}{n_O} \cdot \left(n + \frac{\Delta n}{\Delta M} \cdot M \right) \cdot \frac{1}{0.9} \right] + 1 [\text{V}]$$

3.4.2 Logic Supply

Separate power supply

The logic part of the controller may be supplied by separate supply voltage provided that it meets the below stated minimum requirements.

- *Module:* The logic supply must be connected separately.
- *Compact:* If not supplied separately, the logic supply is internally connected to the power supply.

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A22	X1/X2 3	$+V_c$	Nominal logic supply voltage (+10...+50 VDC)
A30...A36**	X1/X2 1	GND	Ground
** Connect all pins in respect to the individual pin current rating.			

Table 3-42 Logic supply – Pin assignment

Power supply requirements	
Output voltage	$+V_c$ 10...50 VDC
Absolute supply voltage	min. 8 VDC; max. 56 VDC
Min. output power	P_c min. 3.5 W

3.4.3 Motor

The EPOS4 is set to drive either maxon DC motors (brushed) or maxon EC motors (brushless).

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A1...A7**	X3 1	Motor (+M)	Motor +
A8...A14**	X3 2	Motor (–M)	Motor –
–	X3 3	–	not connected
–	X3 4	Motor shield	Cable shield
** Connect all pins in respect to the individual pin current rating.			

Table 3-43 DC motor – Pin assignment

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A1...A7**	X3 1	Motor winding 1	Winding 1
A8...A14**	X3 2	Motor winding 2	Winding 2
A15...A21**	X3 3	Motor winding 3	Winding 3
–	X3 4	Motor shield	Cable shield
** Connect all pins in respect to the individual pin current rating.			

Table 3-44 EC motor – Pin assignment

3.4.4 Hall Sensor

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A30...A36	X4 4	GND	Ground
A37	X4 1	Hall sensor 1	Hall sensor 1 input
A38	X4 2	Hall sensor 2	Hall sensor 2 input
A39	X4 3	Hall sensor 3	Hall sensor 3 input
A40	X4 5	V_{Sensor}	Sensor supply voltage (+5 VDC; $I_L \leq 100 \text{ mA}$)
–	X4 6	Hall shield	Cable shield

Table 3-45 Hall sensor – Pin assignment

Hall sensor	
Sensor supply voltage (V_{Sensor})	+5 VDC
Max. Hall sensor supply current	30 mA
Input voltage	0...24 VDC
Max. input voltage	+24 VDC
Logic 0	typically <0.8 V
Logic 1	typically >2.0 V
Internal pull-up resistor	10 k Ω (referenced to +5.45 V)

Figure 3-22 Hall sensor 1 input circuit (analogously valid for Hall sensors 2 & 3)

3.4.5 Encoder

Best practice

- Differential signals offer good resistance against electrical interference. Therefore, **we recommend using a differential scheme**. Nevertheless, the controller supports both schemes – differential and single-ended (unsymmetrical).
- For best performance, **we strongly recommend using encoders with a line driver**. Otherwise, limitations may apply due to slow switching edges.
- Even though 2-channel will do, **we strongly recommend to use only 3-channel versions**.

Module Header Pin	Compact/CB Connector Pin	Signal	Description
A30...A36	X5 3	GND	Ground
A40	X5 2	V_{Sensor}	Sensor supply voltage (+5 VDC; $I_L \leq 100 \text{ mA}$)
A41	X5 6	Channel A	Digital incremental encoder channel A
A42	X5 5	Channel A $\bar{A}$	Digital incremental encoder channel A complement
A43	X5 8	Channel B	Digital incremental encoder channel B
A44	X5 7	Channel B $\bar{B}$	Digital incremental encoder channel B complement
A45	X5 10	Channel I	Digital incremental encoder channel I
A46	X5 9	Channel I $\bar{I}$	Digital incremental encoder channel I complement

Table 3-46 Encoder – Pin assignment

Encoder (differential)	
Sensor supply voltage (V_{Sensor})	+5 VDC
Max. encoder supply current	70 mA
Min. differential input voltage	$\pm 200 \text{ mV}$
Max. input voltage	$\pm 12 \text{ VDC}$
Line receiver (internal)	EIA RS422 standard
Max. input frequency	6.25 MHz

Continued on next page.

Figure 3-23 Encoder input circuit Ch A “differential” (analogously valid for Ch B & Ch I)

Encoder (single-ended)		
Sensor supply voltage (V_{Sensor})	+5 VDC	
Max. encoder supply current	70 mA	
Input voltage	0...5 VDC	
Max. input voltage	± 12 VDC	
Logic 0	<1.0 V	
Logic 1	>2.4 V	
Input high current	I_{IH} = typically +420 μA @ 5 V	
Input low current	I_{IL} = typically -170 μA @ 0 V	
Max. input frequency	Push-pull	Open collector
	6.25 MHz	40 kHz (internal pull-up only)
		150 kHz (additional external 3k3 pull-up)

Figure 3-24 Encoder input circuit Ch A “single-ended” (analogously valid for Ch B & Ch I)

3.4.6 Sensor

Check on the applied sensor's data sheet

If the specified inrush current or the maximum continuous current of the sensor should exceed 150 mA, you can connect the sensor supply voltage (V_{Sensor}) in parallel to the auxiliary output voltage (V_{Aux}).

3.4.6.1 Incremental Encoder

Module Header Pin	Compact/CB Connector Pin	Signal	Description
B7	X6 1	Channel A	Digital/analog incremental encoder channel A
B8	X6 2	Channel A\	Digital/analog incremental encoder channel A complement
B9	X6 3	Channel B	Digital/analog incremental encoder channel B
B10	X6 4	Channel B\	Digital/analog incremental encoder channel B complement
B11	X6 5	Channel I	Digital/analog incremental encoder channel I
B12	X6 6	Channel I\	Digital/analog incremental encoder channel I complement
B15	X6 10	V_{Aux}	Auxiliary output voltage (+5 VDC; $I_L \leq 150$ mA)
B16	X6 9	GND	Ground

Table 3-47 Incremental encoder – Pin assignment

Digital incremental encoder (differential)	
Auxiliary output voltage (V_{Aux})	+5 VDC
Max. auxiliary supply current	150 mA
Min. differential input voltage	± 200 mV
Max. input voltage	+12 VDC
Line receiver (internal)	EIA RS422 standard
Max. input frequency	6.25 MHz

Continued on next page.

Figure 3-25 Digital incremental encoder input circuit Ch A "differential" (analogously valid for Ch B)

Figure 3-26 Digital incremental encoder input circuit Ch I

Digital incremental encoder (single-ended)

3.4.8 Safe Torque Off I/Os

The STO (Safe Torque Off) function can be utilized to bring the drive to a torque-free, safe condition via two independent inputs. The drive output power stage is switched off if either one of the inputs is not powered.

For in-depth details on the STO functionality → separate document «EPOS4 Application Notes».

Activation of power stage

In order to activate the power stage, **both** STO inputs must be powered.

Module Header Pin	Compact/CB Connector Pin	Signal	Description
–	X9 8	V_{STO}	Activation voltage for STO inputs (+5 VDC) Note: Do not use this voltage for any other purpose

Refresh rate	2.5 kHz
Analog bandwidth of output amplifier	25 kHz
Max. capacitive load	300 nF Note: The increase rate is limited in proportion to the capacitive load (e.g. 5 V/ms @ 300 nF)
Max. output current limit	1 mA

Figure 3-45 AnOUT1 circuit (analogously valid for AnOUT2)

3.4.10 Serial Communication Interface (SCI) / RS232

The SCI is a two-wire asynchronous serial port, commonly known as a UART. The SCI modules support digital communication between the CPU and other asynchronous peripherals that use the standard non-return-to-zero (NRZ) format.

A common use of the Module's SCI is to build an RS232 interface by wiring it to an RS232 transceiver. Alternatively, using any of the Compact versions does not require an external transceiver.

**Bit rate settings**

- Consider the master's maximal bite rate.
- The standard bit rate setting (factory setting) is 115'200 bit/s.

MODULE

Module Header Pin	Signal	Description
B38	GND	Ground
B39	DSP_RxD	Serial communication interface receive (UART)
B40	DSP_TxD	Serial communication interface transmit (UART)

Table 3-55 SCI – Pin assignment

Serial Communication Interface (SCI)	
Input voltage	0...3.3 VDC
Max. input voltage	5 VDC
High-level input voltage	>2.0 VDC
Low-level input voltage	<0.8 VDC
High-level output voltage	>2.4 VDC
Low-level output voltage	<0.4 VDC
Max. bit rate	115'200 bit/s
Data format	NRZ (non-return-to-zero)

Continued on next page.

COMPACT

Compact/CB Connector Pin	Signal	Description

Table 3-56 RS232 – Pin assignment

RS232 Interface	
Max. input voltage	±30 VDC
Output voltage	typically ±9 V @ 3 kΩ to GND
Max. bit rate	115'200 bit/s
RS232 transceiver	EIA RS232 standard

3.4.11 CAN Interface

3.4.11.1 Connection

The EPOS4 is specially designed being commanded and controlled via a Controller Area Network (CAN), a highly efficient data bus very common in all fields of automation and motion control. It is preferably used as a slave node in the CANopen network.

Module Header Pin	Compact/CB Connector Pin	Signal	Description
B35	X11 1 X12 1	CAN high	CAN high bus line
B36	X11 2 X12 2	CAN low	CAN low bus line
B37	X11 3 X12 3	GND	Ground
–	X11 4 X12 4	Shield	Cable shield

Table 3-57 CAN bus line / CAN 1 / CAN 2 – Pin assignment

CAN interface		
Standard	ISO 11898-2:2003	
Max. bit rate	1 Mbit/s	
Max. number of CAN nodes	127/31 (via software/hardware setting)	
Protocol	CiA 301 version 4.2.0	
Identifier setting	Module	By external wiring or software
	Compact	By DIP switch or software

Note

- Consider the CAN master's maximal bit rate.
- The standard bit rate setting (factory setting) is 1 Mbit/s. For connector boards and Compact versions, automatic bit rate detection is set.
- Use 120 Ω termination resistor at both ends of the CAN bus.
- For detailed CAN information → separate document «EPOS4 Communication Guide».

3.4.11.2 Configuration

For Compact version's CAN configuration → "DIP Switch Configuration (SW1)" on page 3-35.

CAN ID (NODE ADDRESS)

The CAN ID is set with input lines CAN ID1...CAN ID5. The node address (1...31) may be coded using binary code.

Module Header Pin	Signal	Description	Binary Code	Valence
B29	CAN ID 1	CAN ID 1	2 ⁰	1
B30	CAN ID 2	CAN ID 2	2 ¹	2
B31	CAN ID 3	CAN ID 3	2 ²	4
B32	CAN ID 4	CAN ID 4	2 ³	8
B33	CAN ID 5	CAN ID 5	2 ⁴	16
B37	GND	Ground		

Table 3-58 CAN ID – Pin assignment

CAN ID	
Max. input voltage	3.3 VDC
Logic 1	connected to GND
Logic 0	not connected

The set CAN ID (node address) can be observed by adding the valences of all inputs connected externally to GND. Use the following table as a (non-concluding) guide:

CAN ID					Node Address
1	2	3	4	5	
0*	0	0	0	0	–
1**	0	0	0	0	1
0	1	0	0	0	2
0	0	1	0	0	4
1	0	1	0	0	5
0	0	0	1	0	8
0	0	0	0	1	16
1	1	1	1	1	31

0* = CAN ID input line not connected 1** = CAN ID input line externally connected to GND

Table 3-59 CAN ID – Examples

Setting the CAN ID by «EPOS Studio»

- The CAN ID may be set by software (changing object "Node ID", range 1...127).
- The CAN ID set by the software is valid if the Node Address is set to "0" (all CAN ID input lines not connected).

CAN AUTOMATIC BIT RATE DETECTION

With this function, the CANopen interface can be put in a “listen only” mode. For further details → separate document «EPOS4 Firmware Specification». Automatic bit rate detection is activated when the input line is externally connected to GND.

Bit rate detection	
Auto Bit Rate GND	Pin B34 Pin B38
Max. input voltage	3.3 VDC
Logic 1	connected to GND
Logic 0	not connected

3.4.12 Serial Peripheral Interface (SPI)

The SPI is a high-speed synchronous serial input/output port allowing the use of optional maxon extension modules.

**Note**

Do not connect any other signals to the SPI apart from those for the maxon extension modules!

Module Header Pin	Signal	Description
B38	GND	Ground
B41	SPI_CLK	Serial Peripheral Interface clock
B42	SPI_IRQ	Serial Peripheral Interface interrupt request
B43	SPI_SOMI	Serial Peripheral Interface Slave output, Master input
B44	SPI_SIMO	Serial Peripheral Interface Slave input, Master output
B45	SPI_CS2	Serial Peripheral Interface chip select 2
B46	SPI_CS1	Serial Peripheral Interface chip select 1

Table 3-60 SPI – Pin assignment

3.4.13 USB (X13)

Hot plugging the USB interface may cause hardware damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

Figure 3-46 USB connector X13

Compact/CB Connector Pin	PC's USB Terminal	Signal	Description
X13 1	1	V_{BUS}	USB bus supply voltage input +5 VDC
X13 2	2	USB_D-	USB Data- (twisted pair with Data+)
X13 3	3	USB_D+	USB Data+ (twisted pair with Data-)
X13 4	–	ID	not connected
X13 5	4	GND	USB ground

Table 3-61 USB connector X13 – Pin assignment

USB Type A - micro B Cable (403968)	
Cross-section	According to USB 2.0 / USB 3.0 specification

Head A	USB Type "micro B", male
Head B	USB Type "A", male

Table 3-62 USB Type A - micro B Cable

USB	
USB Standard	USB 2.0 / USB 3.0 (full speed)
Max. bus supply voltage	+5.25 VDC
Max. DC data input voltage	–0.5...+3.8 VDC

3.5 Status Indicators

The EPOS4 features LED indicators to display the device condition. For detailed information → separate document «EPOS4 Firmware Specification».

Figure 3-47 Status LED

The LEDs display the actual status and possible errors of the EPOS4:

- Green LED shows the status
- Red LED indicates errors

LED		Status / Error
Green	Red	
Slow	OFF	Power stage is disabled. The EPOS4 is in status... • "Switch ON Disabled" • "Ready to Switch ON" • "Switched ON"
ON	OFF	Power stage is enabled. The EPOS4 is in status... • "Operation Enable" • "Quick Stop Active"
OFF	ON	FAULT state. The EPOS4 is in status... • "Fault"
ON	ON	Power stage is enabled. The EPOS4 is in temporary status... • "Fault Reaction Active"
Flash	ON	No valid firmware or firmware download in progress
Flash = Flashing (≈0.9 s OFF/≈0.1 s ON)		Slow = Slow blinking (≈1 Hz)

Table 3-63 Status LED

••page intentionally left blank••

4 Motherboard Design Guide

The «Motherboard Design Guide» provides helpful information on integrating the Module on a printed circuit board. It contains recommendations for the motherboard layout and specifies external components that may be required, pin assignments, and connection examples.

CAUTION

Dangerous Action

Errors in implementing the design can result in serious Injury!

- *Only proceed if you are skilled in electronics design!*
- *Designing a printed circuit board requires special skills and knowledge and may only be performed by experienced electronic developers!*
- *This quick guide is only intended as an aid, does not make any claim to completeness, and will not automatically result in a functional component!*

Get help

If you are not trained in the design and development of printed circuit boards, you will need additional support for this point.

maxon motor will be happy to provide you with a quote for designing and manufacturing a motherboard for your specific application.

4.1 Requirements for Components of Third-party Suppliers

Best practice

For references and recommended components consult →Table 4-64.

4.1.1 Socket Headers

For implementation of the Module, 1.27 mm box headers are required.

4.1.2 Supply Voltage

To protect the Module, we recommend using an external circuit breaker, a TVS diode, and a capacitor in the voltage supply cable. In this regard, please note the following recommendations:

Figure 4-48 Wiring of power supply

INPUT FUSE (FU1)

An input fuse (FU1) is necessary in order to provide reverse polarity protection. Together with an unipolar TVS diode (D1), this prevents current from flowing in the wrong direction.

TVS DIODE (D1)

To protect against overvoltage resulting from voltage transients or brake energy feedback, we recommend connecting a TVS (transient voltage suppressor) diode (D1) to the voltage supply line.

CAPACITOR (C1)

The function of the Module does not necessarily require the use of an external capacitor. Nevertheless, to further reduce voltage ripple and feedback currents, an electrolytic capacitor (C1) can be connected to the voltage supply line. Use of an electrolytic capacitor is also recommended to avoid oscillations caused by supply cable inductance or the Module's built-in capacitors that could lead to a voltage overshoot at power plug-in.

4.1.3 Logic Supply Voltage

The Module features a logic supply voltage input. Its voltage range is 10...50 V and must be either sourced separately or by the power supply voltage.

Figure 4-49 Wiring of logic supply

INPUT FUSE (FU1)

An input fuse (FU1) is necessary in order to provide reverse polarity protection. Together with an unipolar TVS diode (D2), this prevents current from flowing in the wrong direction.

TVS DIODE (D2)

If the logic supply voltage is sourced separately, a transient voltage suppressor diode (D2) at the logic supply voltage input can be connected to protect the module against overvoltage.

CAPACITOR (C2)

Use an electrolytic capacitor (C2) if the logic supply is sourced separately. This will avoid oscillations caused by supply cable inductance or the Module's built-in capacitors that could lead to a voltage overshoot at power plug-in.

4.1.4 Motor Cables and Motor Chokes

The Module is not equipped with internal motor chokes.

The majority of motors and applications do not require additional chokes. However, in case of high supply voltage with very low terminal inductance, the ripple of the motor current can reach an unacceptably high value. This causes the motor to heat up unnecessarily and causes instable control behavior. The minimum terminal inductance required per phase can be calculated using the following formula:

$$L_{Phase} \geq \frac{1}{2} \cdot \left(\frac{V_{CC}}{6 \cdot f_{PWM} \cdot I_N} - (0.3 \cdot L_{Motor}) \right)$$

$L_{Phase}[H]$	Additional external inductance per phase
$V_{CC}[V]$	Operating voltage +V _{CC}
$f_{PWM}[Hz]$	Switching frequency of the power stage = 50'000 Hz
$I_N[A]$	Nominal current of the motor (→line 6 in the maxon catalog)
$L_{Motor}[H]$	Terminal inductance of the motor (→line 11 in the maxon catalog)

If the result of the calculation is negative, no additional chokes are necessary. Nevertheless, the use of chokes in combination with additional filter components can be useful to reduce the emission of electromagnetic interference.

An additional choke must feature electromagnetic shielding, an adequate saturation current, minimal losses, and a nominal current greater than the continuous current of the motor. The below wiring example refers to an additional inductance of 2.2 µH or 10 µH. If a different additional inductance is required, also the filter components must be adapted accordingly. Should you need further help with the filter design, contact maxon Support at →<http://support.maxonmotor.com>.

Example 1

Example 2

Figure 4-50 Wiring of motor winding 1 (analogously valid also for motor windings 2 & 3)

4.1.5 Recommended Components and Manufacturers

Recommended components																	
Socket header	Dual row socket strip, pluggable, 1.27 mm pitch, contact length 2.9 mm, current rating per pin = $I_{cont} / 1 \text{ A}$ 23 poles, 2 rows: - maxon motor (590738) - E-Tec (BS2-046-H45B-55/11) - Confectronic / Elcotron (2243-A46G00DPT-M/U842) - Harwin (M50-4302345)																
Fuse (FU1)	Littelfuse 157 Series, Fuse 10 A, 26.46 A²sec (0157010)																
TVS Diode (D1; D2)	<table> <tr> <td>• Vishay (SMBJ54A)</td><td>$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.3 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$</td></tr> <tr> <td>• Fairchild (SMBJ54A)</td><td>$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$</td></tr> <tr> <td>• Littelfuse (SMBJ54A)</td><td>$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$</td></tr> </table>	• Vishay (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.3 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$	• Fairchild (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$	• Littelfuse (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$										
• Vishay (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.3 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$																
• Fairchild (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$																
• Littelfuse (SMBJ54A)	$U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$																
Capacitor (C1)	The ripple current load for C1 depends on the motor's operating point and the power supply output capacity. Under worst case conditions however, the ripple current may reach $I_{cont} / 2$. Use capacitors with rated voltage $\geq 63 \text{ V}$ and adequate ripple current to avoid overheating or life time reduction. Example for C1 worst-case dimensioning: $I_{cont} = 5 \text{ A} \rightarrow$ Rubycon (63YXJ470M12.5X25); 470 μF, 63 V, 1990 mA r.m.s.																
Capacitor (C2)	To avoid voltage overshoot at power plug-in with a separately sourced logic supply, use an electrolytic capacitor covering the following requirements: 33 μF or 47 μF, 63 V, at least 265 mA r.m.s. - Rubicon (63ZLH47MEFCTA6.3X11) or (63YXJ47M6.3X11) - Panasonic (EEU-FR1J470B) - Nippon Chemicon (EKYB630ELL330MF11D) or (EKY-630 ELL330MF11D)																
Motor Choke (L)	Inductance: $\rightarrow$ "Motor Cables and Motor Chokes" on page 4-74 Rated current: $I_{rms} \geq I_{cont}$; $I_{sat} \geq I_{peak}$ Construction: shielded 10 μH: <table> <tr> <td>• Würth (WE-PD-XXL / 7447709100)</td><td>$I_{rms} 7.1 \text{ A}$, $I_{sat} 10.5 \text{ A}$, 12 x 12 x 10 mm</td></tr> </table> 2.2 μH: <table> <tr> <td>• Bourns (SRP7028A-2R2M)</td><td>$I_{rms} 8 \text{ A}$, $I_{sat} 14 \text{ A}$, 7.3 x 6.6 x 2.8 mm</td></tr> <tr> <td>• Eaton (HCM0703-2R2-R)</td><td>$I_{rms} 8 \text{ A}$, $I_{sat} 14 \text{ A}$, 7.1 x 6.6 x 3 mm</td></tr> <tr> <td>• Würth (744311220)</td><td>$I_{rms} 9 \text{ A}$, $I_{sat} 13 \text{ A}$, 7 x 6.9 x 3.8 mm</td></tr> </table>	• Würth (WE-PD-XXL / 7447709100)	$I_{rms} 7.1 \text{ A}$, $I_{sat} 10.5 \text{ A}$, 12 x 12 x 10 mm	• Bourns (SRP7028A-2R2M)	$I_{rms} 8 \text{ A}$, $I_{sat} 14 \text{ A}$, 7.3 x 6.6 x 2.8 mm	• Eaton (HCM0703-2R2-R)	$I_{rms} 8 \text{ A}$, $I_{sat} 14 \text{ A}$, 7.1 x 6.6 x 3 mm	• Würth (744311220)	$I_{rms} 9 \text{ A}$, $I_{sat} 13 \text{ A}$, 7 x 6.9 x 3.8 mm

Table 4-64 Motherboard Design Guide – Recommended components

4.2 Design Guidelines

The following instructions are intended to serve as an aid when designing an application-specific motherboard and ensures the correct and reliable integration of the Module.

While designing a motherboard, consider the following characteristics of the Module:

- Pin assignment (→page 3-18)
- Technical data (→page 2-11) and dimensional drawing (→page 2-14)

4.2.1 Ground

All ground connections (GND) should be internally connected to the Module (equal potential). It is customary to equip the motherboard with a ground plane. All ground connections should be connected to the voltage supply ground via wide conductive tracks.

Pin	Signal	Description
A30...A36	GND	Ground
B16	GND	Ground
B37...B38	GND	Ground

Table 4-65 Motherboard Design Guide – Grounding

If an earth potential is in place or required, the ground plane should be connected to the earth potential via one or more capacitors. The use of ceramic capacitors with 100 nF and 100 V is recommended.

4.2.2 Layout

Guidelines for the layout of the motherboard:

- Connector pins [A23], [A24], [A25], [A26], [A27], [A28], and [A29] for +V_{CC} (nominal power supply voltage) should be connected to the fuse via wide conductive tracks.
- Connector pins [A30], [A31], [A32], [A33], [A34], [A35], [A36], [B16], [B37], and [B38] for GND (ground) should be connected with the operating voltage ground via wide conductive tracks.
- The width of the conductive tracks and the copper coating thickness of the conductors for supply voltage and motor depend on the current required in your application. A minimum track width of 75 mil and a minimum copper coating thickness of 35 µm are recommended.

4.3 SMT Footprint

Figure 4-51 SMT footprint [mm] – Top View

Signs and abbreviations used

The subsequent diagrams feature this signs and abbreviations:

- Items marked with an asterisk (*) will be available with an upcoming firmware release.
- «EC Motor» stands for brushless EC motor (BLDC).
-  Ground safety earth connection (optional).
