READ THIS FIRST

These instructions are intended for qualified technical personnel. Prior commencing with any activities...

- you must carefully read and understand this manual and
- you must follow the instructions given therein.

The EPOS4 70/15 positioning controller is considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and is intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Therefore, you must not put the device into service,...

- unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- unless the other machinery fulfills all relevant health and safety aspects!
- unless all respective interfaces have been established and fulfill the herein stated requirements!

1 ABOUT

1.1 About this Document

1.1.1 Intended Purpose

Use the document to...
–stay safe,
–be fast,
–end up with set-up and ready-to-go equipment.

The purpose of the present document is to familiarize you with the EPOS4 70/15 positioning controller. It will highlight the tasks for safe and adequate installation and/or commissioning. Follow the described instructions ...

- to avoid dangerous situations,
- to keep installation and/or commissioning time at a minimum,
- to increase reliability and service life of the described equipment.

The present document is part of a documentation set and contains performance data and specifications, information on fulfilled standards, details on connections and pin assignment, and wiring examples. The below overview shows the documentation hierarchy and the interrelationship of its individual parts:

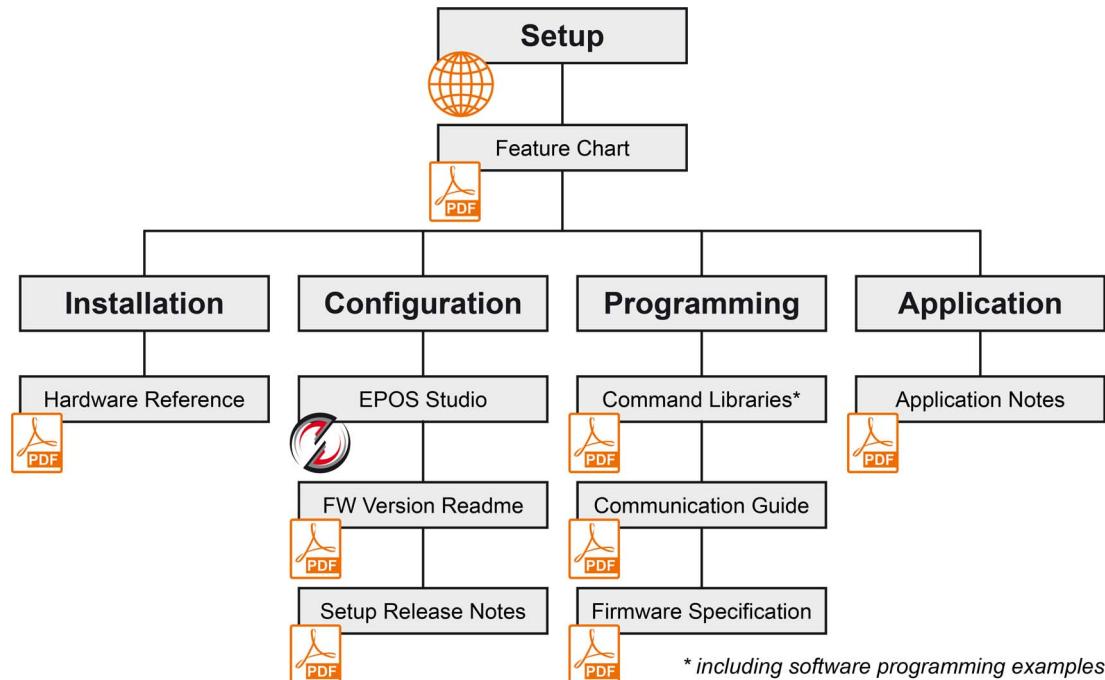

Figure 1-1 Documentation structure

1.1.2 Target Audience

The present document is intended for trained and skilled personnel. It conveys information on how to understand and fulfill the respective work and duties.

1.1.3 How to use

Throughout the document, the following notations and codes will be used.

| Notation | Meaning |
|----------|--|
| (n) | refers to an item (such as part numbers, list items, etc.) |
| → | denotes "see", "see also", "take note of" or "go to" |

Table 1-1 Notation used

1.1.4 Symbols & Signs

In the course of the present document, the following symbols and signs will be used.

| Type | Symbol | Meaning | |
|-------------------|---|---|--|
| Safety alert |  (typical) | DANGER | Indicates an imminent hazardous situation . If not avoided, it will result in death or serious injury . |
| | | WARNING | Indicates a potential hazardous situation . If not avoided, it can result in death or serious injury . |
| | | CAUTION | Indicates a probable hazardous situation or calls the attention to unsafe practices. If not avoided, it may result in injury . |
| Prohibited action |  (typical) | Indicates a dangerous action. Hence, you must not! | |
| Mandatory action |  (typical) | Indicates a mandatory action. Hence, you must! | |
| Information |  | Requirement / Note / Remark | Indicates an activity you must perform prior continuing, or gives information on a particular item you need to observe. |
| |  | Best practice | Indicates an advice or recommendation on the easiest and best way to further proceed. |
| |  | Material Damage | Indicates information particular to possible damage of the equipment. |

Table 1-2 Symbols and signs

1.1.5 Trademarks and Brand Names

For easier legibility, registered brand names are listed below and will not be further tagged with their respective trademark. It must be understood that the brands (the list below is not necessarily concluding) are protected by copyright and/or other intellectual property rights even if their legal trademarks are omitted in the later course of this document.

| Brand Name | Trademark Owner |

CH-6072 Sachseln www.maxongroup.com

1.2 About the Device

Capabilities of the device, included features, and supported motors.

maxon's EPOS4 70/15 is a small-sized, full digital, smart positioning control unit. Its high power density allows flexible use for brushed DC and brushless EC (BLDC) motors up to approximately 1050 Watts with various feedback options, such as Hall sensors, incremental encoders as well as absolute sensors in a multitude of drive applications.

The device is specially designed to be commanded and controlled as a slave node in a CANopen network. In addition, the unit can be operated via any USB or RS232 communication port of a Windows or Linux workstation. Moreover, the integrated extension interface allows pooling with optionally available communication interfaces, such as EtherCAT or other additional functionalities.

Latest technology, such as field-oriented control (FOC), acceleration/velocity feed forward, or dual loop, in combination with highest control cycle rates allow sophisticated, ease-of-use motion control.

Find the latest edition of the present document as well as additional documentation and software for EPOS4 positioning controllers also on the Internet: ➔<http://epos.maxongroup.com>

In addition, you may wish to browse the EPOS video library. It features video tutorials that provide easy to follow instructions on how to get started with «EPOS Studio» and shows you tips and tricks on how to setup communication interfaces, and so on. Explore on Vimeo: ➔<https://vimeo.com/album/4646388>

1.3 About the Safety Precautions

Keep in mind:

*Safety first!
Always!*

- Make sure that you have read and understood the note "READ THIS FIRST" on page A-2!
- Do not engage with any work unless you possess the stated skills (➔chapter "1.1.2 Target Audience" on page 1-5)!
- Refer to ➔chapter "1.1.4 Symbols & Signs" on page 1-6 to understand the subsequently used indicators!
- You must observe any regulation applicable in the country and/or at the site of implementation with regard to health and safety/accident prevention and/or environmental protection!

DANGER

High voltage and/or electrical shock

Touching live wires causes death or serious injuries!

- Consider any power cable as connected to live power, unless having proven the opposite!
- Make sure that neither end of cable is connected to live power!
- Make sure that power source cannot be engaged while work is in process!
- Obey lock-out/tag-out procedures!
- Make sure to securely lock any power engaging equipment against unintentional engagement and tag it with your name!

Requirements

- Make sure that all associated devices and components are installed according to local regulations.
- Be aware that, by principle, an electronic apparatus cannot be considered fail-safe. Therefore, you must make sure that any machine/apparatus has been fitted with independent monitoring and safety equipment. If the machine/apparatus should break down, if it is operated incorrectly, if the control unit breaks down or if the cables break or get disconnected, etc., the complete drive system must return – and be kept – in a safe operating mode.
- Be aware that you are not entitled to perform any repair on components supplied by maxon.

Electrostatic sensitive device (ESD)

- Wear working cloth and use equipment in compliance with ESD protective measures.
- Handle device with extra care.

2 SPECIFICATIONS

2.1 Technical Data

| EPOS4 70/15 (594385) | | |
|----------------------|--|--|
| Electrical Rating | Nominal power supply voltage $+V_{CC}$ 10...70 VDC | |
| | Nominal logic supply voltage $+V_C$ 10...70 VDC | |
| | Absolute supply voltage $+V_{min}$ / $+V_{max}$ 8 VDC / 75 VDC | |
| | Output voltage (max.) 0.9 x $+V_{CC}$ | |
| | Output current I_{cont} / I_{max} (<60 s) 15 A / 30 A | |
| | Pulse Width Modulation frequency 50 kHz | |
| | Sampling rate PI current controller 25 kHz (400 μ s) | |
| | Sampling rate PI speed controller 2.5 kHz (400 μ s) | |
| | Sampling rate PID positioning controller 2.5 kHz (400 μ s) | |
| | Sampling rate analog input 2.5 kHz (400 μ s) | |
| | Max. efficiency 98% (→Figure 2-3) | |
| | Max. speed DC motor limited by max. permissible speed (motor) and max. output voltage (controller) | |
| | Max. speed EC motor (block) 100'000 rpm (1 pole pair) | |
| | Max. speed EC motor (sinusoidal) 50'000 rpm (1 pole pair) | |
| | Built-in motor choke 3 x 15 μ H; 15 A | |
| Inputs & Outputs | Digital Input 1 (general purpose) Digital Input 2 (general purpose) Digital Input 3 (general purpose) Digital Input 4 (general purpose) | DIP switch-selectable levels: • Logic: +2.0...+30 VDC • PLC: +9.0...+30 VDC |
| | Digital Output 1 (general purpose) Digital Output 2 (general purpose) | max. 36 VDC / $I_L \leq 500$ mA (open collector with internal pull-up) |
| | STO Input 1 STO Input 2 | +4.5...+30 VDC (optically isolated) |
| | STO Output | max. 30 VDC / $I_L \leq 15$ mA (optically isolated with self-resetting short-circuit protection) |
| | Analog Input 1 Analog Input 2 | Resolution 12-bit, -10...+10 V, 10 kHz, differential |
| | Analog Output 1 Analog Output 2 | Resolution 12-bit, -4...+4 V, 25 kHz, referenced to GND |
| | Digital Hall sensor signals H1, H2, H3 | +2.0...+24 VDC (internal pull-up) |
| | Digital incremental encoder signals A, A\, B, B\, I, I\ | EIA RS422, max. 6.25 MHz |

Continued on next page.

EPOS4 70/15 (594385)

| EPOS4 70/15 (594385) | | | |
|---|--|---|--|
| Inputs & Outputs (continued) | Sensor signals (choice between multiple functions) <ul style="list-style-type: none"> Digital incremental encoder Analog incremental encoder SinCos SSI absolute encoder High-speed digital input 1...4 High-speed digital output 1 | 3-channel, EIA RS422, max. 6.25 MHz 3-channel, resolution 12-bit, ± 1.8 V, differential configurable, EIA RS422, 0.4...2 MHz EIA RS422, max. 6.25 MHz EIA RS422, max. 6.25 MHz | |
| Voltage Outputs | Sensor supply voltage V_{Sensor} | $+5 \text{ VDC} / I_L \leq 100 \text{ mA}$ | |
| | Auxiliary output voltage V_{Aux} | $+5 \text{ VDC} / I_L \leq 150 \text{ mA}$ | |
| Motor Connections | DC motor | + Motor, - Motor | |
| | EC motor | Motor winding 1, Motor winding 2, Motor winding 3 | |
| Interfaces | RS232 | max. 115'200 bit/s | |
| | USB 2.0 / USB 3.0 | Full Speed | |
| | CAN | max. 1 Mbit/s | |
| | EtherCAT [c] | Full duplex (100 Mbit/s) as to IEEE 802.3 100 Base T | |
| Status Indicators | Device Status | Operation | green LED |
| | | Error | red LED |
| | NET Status | RUN state | green LED |
| | | Error | red LED |
| | NET Port | Link activity | green LED |
| Physical | Weight | approx. 372 g | |
| | Dimensions (L x W x H) | 125.0 x 94.5 x 38.7 mm | |
| | Mounting | mounting holes for M4 screws | |
| Environment | Temperature | Operation | -30...+50 °C |
| | | Extended range [a] | +50...+85 °C; Derating: $-0.429 \text{ A}/\text{°C}$ (→Figure 2-2) Additional derating with inserted extension card: Ambient temperature less 5 °C (→Figure 2-2) [d] |
| | | Storage | -40...+85 °C |
| | Altitude [b] | Operation | 0...10'000 m MSL |
| | Humidity | 5...90% (condensation not permitted) | |

- [a] Operation within the extended range is permitted. However, a respective derating (declination of output current I_{cont}) as to the stated values will apply.
- [b] Operating altitude in meters above Mean Sea Level, MSL.
- [c] Available with optional EPOS4 EtherCAT Card.
- [d] Derating further increases with an inserted extension card. For the actual value, consult →Figure 2-2 and shift the graph horizontally to the left by the specified value.

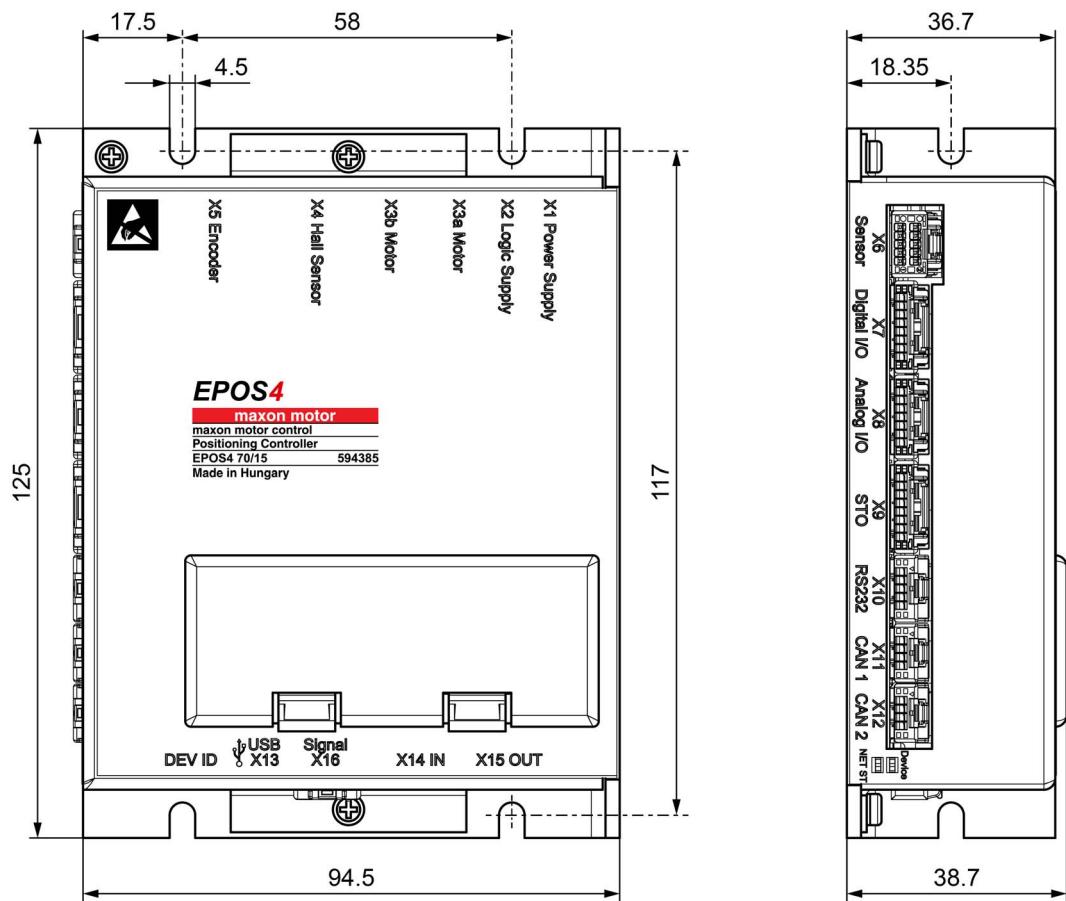

Figure 2-4 Dimensional drawing [mm]

2.5 Standards

The described device has been successfully tested for compliance with the below listed standards. In practical terms, only the complete system (the fully operational equipment comprising all individual components, such as motor, servo controller, power supply unit, EMC filter, cabling etc.) can undergo an EMC test to ensure interference-free operation.

Important Notice

The device's compliance with the mentioned standards does not imply its compliance within the final, ready to operate setup. In order to achieve compliance of your operational system, you must perform EMC testing of the involved equipment as a whole.

| Electromagnetic Compatibility | | |
|-------------------------------|------------------------|---|
| Generic | IEC/EN 61000-6-2 | Immunity for industrial environments |
| | IEC/EN 61000-6-3 | Emission standard for residential, commercial and light-industrial environments |
| Applied | IEC/EN 55022 (CISPR22) | Radio disturbance characteristics / radio interference |
| | IEC/EN 61000-4-3 | Radiated, radio-frequency, electromagnetic field immunity test >10 V/m |
| | IEC/EN 61000-4-4 | Electrical fast transient/burst immunity test ±2 kV |
| | IEC/EN 61000-4-6 | Immunity to conducted disturbances, induced by radio-frequency fields 10 Vrms |

| Others | | |
|-------------|------------------|--|
| Environment | IEC/EN 60068-2-6 | Environmental testing – Test Fc: Vibration (sinusoidal, 10...500 Hz, 20 m/s ²) |
| | MIL-STD-810F | Random transport (10...500 Hz up to 2.53 g _{rms}) |
| Safety | UL File Number | Unassembled printed circuit board: E207844 |
| Reliability | MIL-HDBK-217F | Reliability prediction of electronic equipment Environment: Ground, benign (GB) Ambient temperature: 298 K (25 °C) Component stress: In accordance with circuit diagram and nominal power Mean Time Between Failures (MTBF): 254'446 hours |

Table 2-6 Standards

3 SETUP

IMPORTANT NOTICE: PREREQUISITES FOR PERMISSION TO COMMENCE INSTALLATION

The EPOS4 70/15 positioning controller is considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and is intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

WARNING

Risk of injury

Operating the device without the full compliance of the surrounding system with the EU Directive 2006/42/EC may cause serious injuries!

- Do not operate the device, unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- Do not operate the device, unless the other machinery fulfills all relevant health and safety aspects!
- Do not operate the device, unless all respective interfaces have been established and fulfill the requirements stated in this document!

3.1 Generally applicable Rules

Maximal permitted supply voltage

- Make sure that supply power is between 10...70 VDC.
- Supply voltages above 75 VDC, or wrong polarity will destroy the unit.
- Note that the necessary output current is depending on the load torque. Yet, the output current limits are as follows:
 - continuous max. 15 A
 - short-time (acceleration) max. 30 A

Hot plugging the USB interface may cause hardware damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

Hot plugging/hot swapping the extension slots may cause hardware damage

Switch off the controller's power supply before removing or inserting an extension card.

3.2 Cabling

PLUG&PLAY

Take advantage of maxon's prefab cable assemblies. They come as ready-to-use parts and will help to reduce commissioning time to a minimum.

- a) Check the following table and find the part number of the cable assembly that matches the setup you will be using.
- b) Follow the cross-reference to get the cable's pin assignment.

| Connector | Prefab Cable Assembly Designation | Part Number | ➔Page |
|-----------|---|------------------|--------------|
| X1 | Power Cable High Current Mandatory for supply of power stage! | 520850 | 3-19 |
| X2 | Power Cable Optional for separate logic supply! | 275829 | 3-21 |

Table 3-7 Prefab maxon cables

MAKE&BAKE YOUR OWN

If you decide not to employ maxon's prefab cable assemblies, you might wish to use the prepackaged kit that contains all connectors required to make up your own cabling.

| EPOS4 Connector Set (520859) | | Quantity |

Table 3-9 Recommended tools

3.3 Connections

The actual connection will depend on the overall configuration of your drive system and the type of motor you will be using.

For each connector you will find detailed information on the pin assignment, the available accessories and prefab cable assemblies, the requirements that must be met, if any, and the circuitry.

How to read pin assignment tables

In the later course of the document you will find tables containing information on the EPOS4's hardware connectors, their wired signals and assigned pins as well as details on the available prefab cables.

- The first column describes both the pin number of the connector and of the matching prefab maxon cable's Head A.
- The second column describes the cable core color of the prefab maxon cable.
- The third column describes the pin number of the prefab maxon cable's Head B.

Follow the description in given order and choose the wiring diagram (→as of page 4-63) that best suits the components you are using.

Figure 3-5 Connectors

3.3.1 Power Supply (X1)

Basically, any power supply may be used provided that it meets the stated minimum requirements.

Use of X1 is mandatory

You must employ X1 to connect the controller to the electrical supply. Use X2 only if you wish to connect an optional, separately wired logic supply.

Best practice

Keep the motor mechanically disconnected during the setup and adjustment phase.

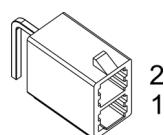

Figure 3-6 Power supply connector X1

| X1 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |

| Power supply requirements | |
|---------------------------|---|
| Output voltage | +V _{cc} 10...70 VDC |
| Absolute output voltage | min. 8 VDC; max. 75 VDC |
| Output current | Depending on load <ul style="list-style-type: none"> • continuous max. 15 A • short-time (acceleration, <60 s) max. 30 A |

Table 3-12 Power supply requirements

- 1) Use the formula below to calculate the required voltage under load.
- 2) Choose a power supply according to the calculated voltage. Thereby consider:
 - a) During braking of the load, the power supply must be capable of buffering the recovered kinetic energy (for example, in a capacitor).
 - b) If you are using an electronically stabilized power supply, make sure that the overcurrent protection circuit is configured inoperative within the operating range.

The formula already takes the following into account:

- Maximum PWM duty cycle of 90%
- Controller's max. voltage drop of 1 V @ 15 A

KNOWN VALUES:

- Operating torque M [mNm]
- Operating speed n [rpm]
- Nominal motor voltage U_N [Volt]
- Motor no-load speed at U_N: n_O [rpm]
- Speed/torque gradient of the motor Δn/ΔM [rpm/mNm]

SOUGHT VALUE:

- Supply voltage +V_{cc} [Volt]

SOLUTION:

$$V_{CC} \geq \left[\frac{U_N}{n_O} \cdot \left(n + \frac{\Delta n}{\Delta M} \cdot M \right) \cdot \frac{1}{0.9} \right] + 1 [V]$$

3.3.2 Logic Supply (X2)

Separate power supply

The logic part of the controller may be supplied by a separate supply voltage provided that it meets the below stated minimum requirement:

If not supplied separately, the logic supply is internally connected to the power supply.

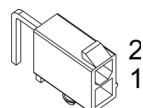

Figure 3-7 Logic supply connector X2

| X2 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |
|---------------|--------------------|------------|-----------------|--------------------------------------|
| 1 | black | - | GND | Ground |
| 2 | black | + | +V _C | Logic supply voltage (+10...+70 VDC) |

Table 3-13 Logic supply connector X2 – Pin assignment

| Power Cable (275829) | | |
|----------------------|---------------------------------------|---|
| A | | B |
| Cross-section | 2 x 0.75 mm ² , grey | |
| Length | 3 m | |
| Head A | Plug | Molex Mini-Fit Jr., 2 poles (39-01-2020) |
| | Contacts | Molex Mini-Fit Jr. female crimp terminals (45750) |
| Head B | Wire end sleeves 0.75 mm ² | |

Table 3-14 Power Cable

| Power supply requirements | |
|---------------------------|-----------------------------|
| Output voltage | +V _C 10...70 VDC |
| Absolute supply voltage | min. 8 VDC; max. 75 VDC |
| Min. output power | P _C min. 3.5 W |

Table 3-15 Logic supply requirements

3.3.3 Motor (X3a) (X3b)

The controller is set to drive either maxon EC motor (BLDC, brushless DC motor) or maxon DC motor (brushed DC motor) with separated motor/encoder cable.

Maximum permitted current

The connectors are designed for the following output currents:

- X3a: $I_{cont} \leq 11\text{ A}$
- X3b: $I_{cont} \leq 15\text{ A}$

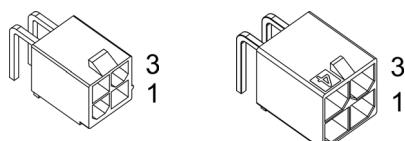

Figure 3-8 Motor connectors X3a (left) and X3b (right)

| X3a X3b Head A | Prefab Cable | Head B | Signal | Description |
|----------------------|-----------------|--------|--------------|-------------------|
| Pin | Color | Pin | | |

| Hall sensor | |
|---|--|
| Sensor supply voltage (V_{Sensor}) | +5 VDC |
| Max. Hall sensor supply current | 30 mA |
| Input voltage | 0...24 VDC |
| Max. input voltage | +24 VDC |
| Logic 0 | typically <0.8 V |
| Logic 1 | typically >2.0 V |
| Internal pull-up resistor | 2.7 kΩ (referenced to +5.45 V - 0.6 V) |

Table 3-22 Hall sensor specification

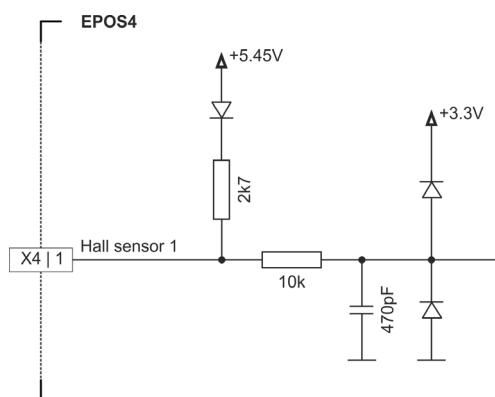

Figure 3-10 Hall sensor 1 input circuit (analogously valid for Hall sensors 2 & 3)

3.3.5 Encoder (X5)

**Best practice**

- Differential signals offer good resistance against electrical interference. Therefore, **we recommend using a differential scheme**. Nevertheless, the controller supports both schemes – differential and single-ended (unsymmetrical).
- For best performance, **we strongly recommend using encoders with a line driver**. Otherwise, limitations may apply due to slow switching edges.
- Even though 2-channel will do, **we strongly recommend to use only 3-channel versions**.

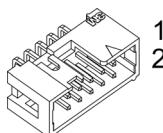

Figure 3-11 Encoder connector X5

| X5 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |
|---------------|--------------------|------------|---------------------|---|
| 1 | brown | 1 | – | not connected |
| 2 | white | 2 | V _{Sensor} | Sensor supply voltage (+5 VDC; I _L ≤ 100 mA) |
| 3 | red | 3 | GND | Ground |

3.3.6 Sensor (X6)

Additional sensors, both incremental and serial encoders, can be connected.

Check on the applied sensor's data sheet

If the specified inrush current or the maximum continuous current of the sensor should exceed 150 mA, you can connect the sensor supply voltage (V_{Sensor}) in parallel to the auxiliary output voltage (V_{Aux}).

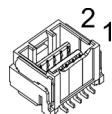

Figure 3-14 Sensor connector X6

| X6 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |
|---------------|--------------------|------------|------------|---|

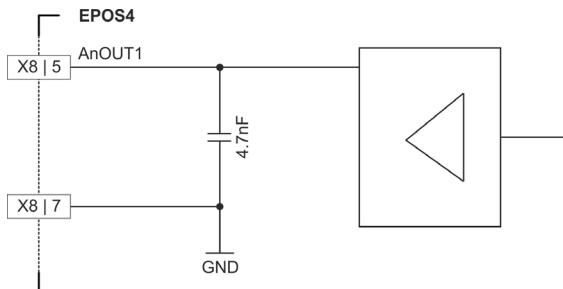

Figure 3-34 AnOUT1 circuit (analogously valid for AnOUT2)

3.3.9 STO (X9)

The STO (Safe Torque Off) function can be utilized to bring the drive to a torque-free, safe condition via two independent inputs. The drive output power stage is switched off if either one of the inputs is not powered.

For in-depth details on the STO functionality see separate document → «EPOS4 Application Notes».

***Non-certified STO functionality***

The implemented STO functionality will not be certified.

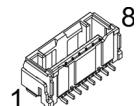

Figure 3-35 STO connector X9

***Activation of power stage***

*In order to activate the power stage, either **both** STO inputs must be powered or the «STO Idle Connector» (→Table 3-49) must be plugged.*

| X9 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |
|---------------|--------------------|------------|------------------|--|
| 1 | white | 1 | STO-IN1+ | Safe Torque Off input 1, positive signal |
| 2 | brown | 2 | STO-IN1- | Safe Torque Off input 1, negative signal |
| 3 | green | 3 | STO-IN2+ | Safe Torque Off input 2, positive signal |

| Output voltage | typically ±9 V @ 3 kΩ to GND |
| Max. bit rate | 115'200 bit/s |
| RS232 transceiver | EIA RS232 standard |

Table 3-55 RS232 interface specification

3.3.11 CAN 1 (X11) & CAN 2 (X12)

The EPOS4 is specially designed being commanded and controlled via a Controller Area Network (CAN), a highly efficient data bus very common in all fields of automation and motion control. It is preferably used as a slave node in the CANopen network.

For the CAN configuration → “DIP Switch Configuration (SW1)” on page 3-58.

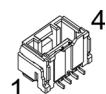

Figure 3-39 CAN 1 connector X11/CAN 2 connector X12

| X11/X12 Head A Pin | Prefab Cable Color | 520857 Head B Pin | 520858 Head B Pin | Signal | Description |

Table 3-58 CAN-CAN Cable

| CAN interface | |
|--------------------------|--|
| Standard | ISO 11898-2:2003 |
| Max. bit rate | 1 Mbit/s |
| Max. number of CAN nodes | 127/31 (via software/hardware setting) |
| Protocol | CiA 301 version 4.2.0 |
| Node-ID setting | By DIP switch or software |

Table 3-59 CAN interface specification

**Note**

- Consider the CAN master's maximal bit rate.
- The standard bit rate setting (factory setting) is 1 Mbit/s, automatic bit rate detection is set.
- Use 120 Ω termination resistor at both ends of the CAN bus.
- For detailed CAN information see separate document ➔«EPOS4 Communication Guide».

3.3.12 USB (X13)

**Hot plugging the USB interface may cause hardware damage**

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

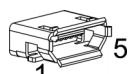

Figure 3-40 USB connector X13

| X13 Head A Pin | PC's USB Termination Head B Pin | Signal | Description |
|----------------------|---------------------------------------|------------------|-------------------------------------|
| 1 | 1 | V _{BUS} | USB bus supply voltage input +5 VDC |
| 2 | 2 | USB_D- | USB Data- (twisted pair with Data+) |
| 3 | 3 | USB_D+ | USB Data+ (twisted pair with Data-) |

| USB | |
|----------------------------|--------------------------------|
| USB Standard | USB 2.0 / USB 3.0 (full speed) |
| Max. bus supply voltage | +5.25 VDC |
| Max. DC data input voltage | -0.5...+3.8 VDC |

Table 3-62 USB interface specification

3.3.13 Extension IN (X14) & Extension OUT (X15)

The EPOS4 70/15 features two NET connectors for extension communication interfaces, such as EtherCAT. One serves for NET input, the other for NET output. Both sockets are identical in respect to their external wiring.

Wrong plugging may cause hardware damage

Even though both NET sockets are prepared for identical external wiring, make sure to always connect them as follows.

- Use only standard Cat5 cables with RJ45 plug, such as maxon's «Ethernet Cable» (422827).
- Use IN (X14) as «Input».
- Use OUT (X15) as «Output».

For detailed information see separate document ➔«EPOS4 Communication Guide».

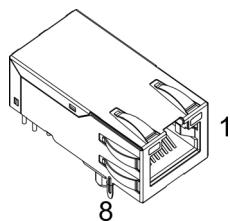

Figure 3-41 Extension IN & OUT connectors X14 & X15

| X14 X15 Head A | Prefab Cable | Head B | Signal | Description |
|----------------------|------------------|--------|--------|--------------------|
| Pin | Color | Pin | | |
| 1 | white/ orange | 1 | TX+ | Transmission Data+ |

| Head B | RJ45 (8P8CS) EIA/TIA-568B |

Table 3-64 Ethernet Cable

3.3.14 Extension Signal (X16)

The connector provides direct access to the signal extension slot EXT2 (→chapter “3.3.15 Extension Slots (EXT1 & EXT2)” on page 3-56) thus allowing the use of signal extension cards (such as for additional absolute sensors or customized signal extensions). The pin assignment is directly related to the corresponding extension card.

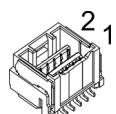

Figure 3-42 Extension Signal connector X16

| X16 Head A Pin | Prefab Cable Color | Head B Pin | Signal | Description |
|----------------|--------------------|------------|--------|--|
| 1 | white | 1 | EXT-1 | |
| 2 | brown | 2 | EXT-2 | |
| 3 | green | 3 | EXT-3 | |
| 4 | yellow | 4 | EXT-4 | |

| 9 | black | 9 | EXT-9 | |
| 10 | violet | 10 | EXT-10 | Depending on signal extension card inserted in extension slot EXT2 (→Table 3-66) |

Table 3-65 Extension Signal connector X16 – Pin assignment

For the matching prefab cable assembly →Table 3-29 on page 3-30.

3.3.15 Extension Slots (EXT1 & EXT2)

The controller provides two extension slots (→Figure 3-43) located underneath the plastic lid at the controller housing's top face. They host optionally available extension cards (→Table 3-66) and thereby expand the controller's comprehensive motion control functionality even further.

- **EXT1** provides connectivity for a communication extension card, such as for EtherCAT. With the optionally available «EPOS4 EtherCAT Card», the controller serves as slave in an EtherCAT network, provides access for EtherCAT master control (such as Beckhoff TwinCAT), and offers real-time operation in an Ethernet master/slave network. For further details see separate document →«EPOS4 Communication Guide».
- **EXT2** provides connectivity for advanced signal extension cards, such as for additional absolute sensors or customized signal extensions. Using the respective optionally available EPOS4 cards, additional functions can be directly accessed via the connector →“Extension Signal (X16)” on page 3-55.

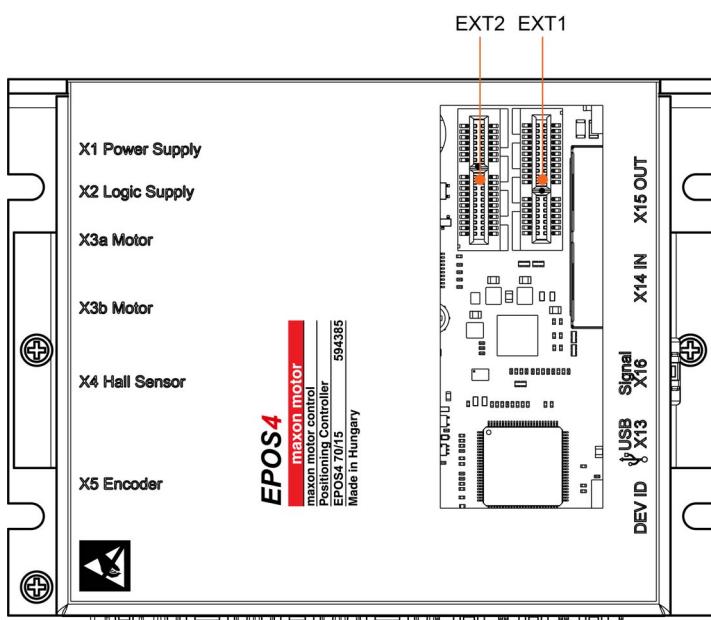

Figure 3-43 Extension slots

An inserted extension card mechanically interlocks in both horizontal and vertical direction.

To insert or remove an extension card, proceed as follows (explained using an «EPOS4 EtherCAT Card»):

Hot plugging/hot swapping the card may cause hardware damage

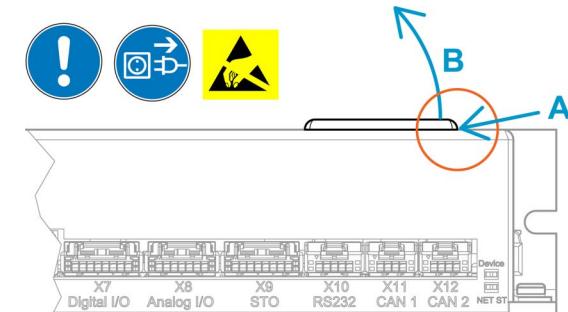

Switch off the controller's power supply before removing or inserting an extension card.

Electrostatic sensitive device (ESD)

- Wear working cloth and use equipment in compliance with ESD protective measures.
- Handle device with extra care.

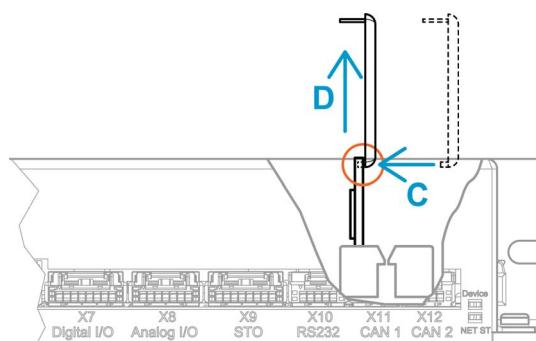

Continued on next page.

**Switch off the controller's power supply.
Comply with ESD protective measures.**

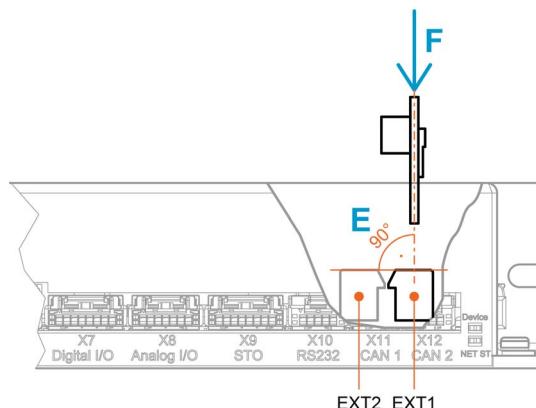

Open plastic lid

- 1) Unlock the two latches (A) on the plastic lid.
- 2) Lift the plastic lid upward (B) and remove.

Remove extension card, if necessary

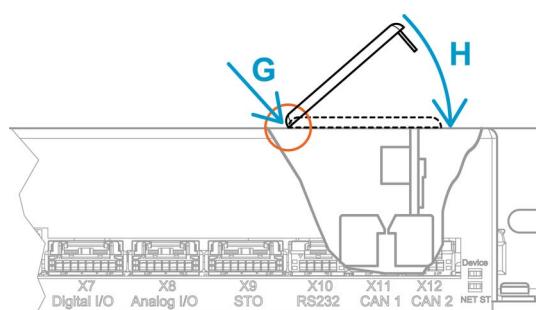

- 3) Turn the plastic lid over and look for the molded catch in one of its corners.
- 4) Insert the catch into the extension card's bore (C).
- 5) Pull both – the plastic lid together with the extension card – straight upward (D).

Make sure that the extension slots are clean and free of any foreign objects.

Insert extension card

- 6) Align the extension card with the PCIe card edge connector and keep it right-angled (E).
- 7) Carefully insert the extension card in the extension slot EXT1 while keeping it right-angled and press down all the way into the PCIe card edge connector (F).

Close plastic lid

- 8) Engage the plastic lid at its rear edge (G).
- 9) Fold down the plastic lid (H), press it down firmly, and let the two latches snap into place.

Figure 3-44 Installation & removal of an extension card

Continued on next page.

| Extension Cards | | |
|-----------------|---------------------|-------------|
| Slot | Description | Part number |
| EXT1 | EPOS4 EtherCAT Card | 581245 |
| EXT2 | — | — |

Table 3-66 Extension cards (optional)

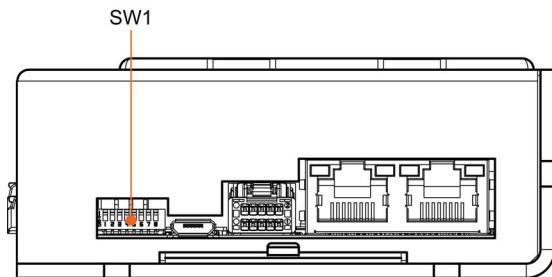

3.3.16 DIP Switch Configuration (SW1)

Figure 3-45 DIP switch SW1

3.3.16.1 CAN ID (Node-ID) / DEV ID

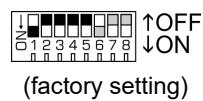

NOTE: Setting the ID by means of DIP switches is currently available for CAN only!

The device's identification (subsequently called "ID") is set by means of DIP switches 1...5. The ID (1...31) may be coded using binary code.

Setting the ID by DIP switch SW1

- By setting the DIP switch (1...5) address 0 ("OFF"), the ID may be set by software (object 0x2000 «Node-ID», range 1...127).
- The ID results in the summed values of DIP switch addresses 1 ("ON").
- DIP switches 6...8 do not have any impact on the ID.

| Switch | Binary Code | Valence | Setting |
|--------|-------------|---------|---------|
| 1 | 2^0 | 1 | |
| 2 | 2^1 | 2 | |
| 3 | 2^2 | 4 | |
| 4 | 2^3 | 8 | |
| 5 | 2^4 | 16 | |

(factory setting)

Table 3-67 DIP switch SW1 – Binary code values

Continued on next page.

The set ID can be observed by adding the valence of all activated switches. Use the following table as a (non-concluding) guide:

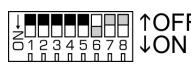

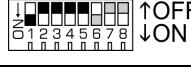

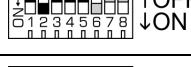

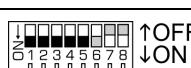

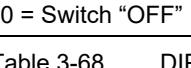

| Setting | 1 | 2 | 3 | 4 | 5 | ID |
|---|---|---|---|---|---|----|
|  ↑OFF ↓ON | 0 | 0 | 0 | 0 | 0 | - |
|  ↑OFF ↓ON | 1 | 0 | 0 | 0 | 0 | 1 |
|  ↑OFF ↓ON | 0 | 1 | 0 | 0 | 0 | 2 |
|  ↑OFF ↓ON | 0 | 0 | 1 | 0 | 0 | 4 |
|  ↑OFF ↓ON | 1 | 0 | 1 | 0 | 0 | 5 |
|  ↑OFF ↓ON | 0 | 0 | 0 | 1 | 0 | 8 |
|  ↑OFF ↓ON | 0 | 0 | 0 | 0 | 1 | 16 |
|  ↑OFF ↓ON | 1 | 1 | 1 | 1 | 1 | 31 |
| 0 = Switch "OFF" 1 = Switch "ON" | | | | | | |

Table 3-72 Spare parts list

3.4 Status Indicators

The EPOS4 features three sets of LED indicators to display the device condition.

- A** **NET Status;** the LEDs display communication RUN states and errors conditions
- B** **Device Status;** the LEDs display the device's operation status and error conditions
- C** **NET Port;** the LED displays the NET link activity

For detailed information see separate document → «EPOS4 Firmware Specification».

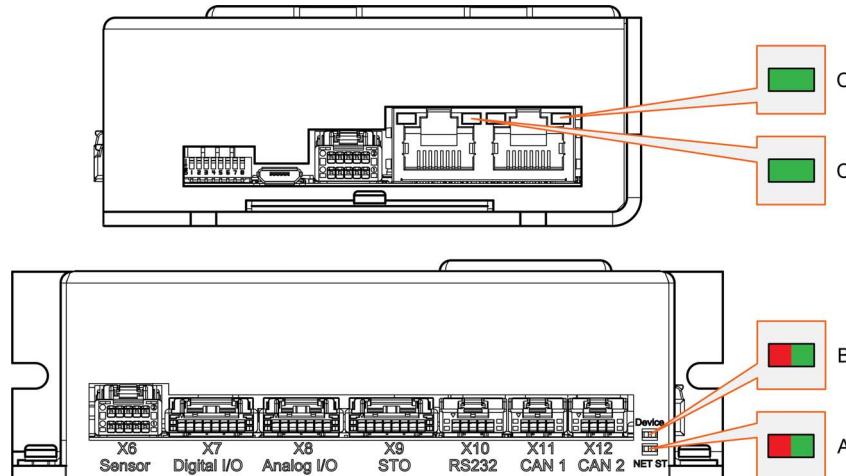

Figure 3-46 LEDs – Location

3.4.1 NET Status

The LEDs (→Figure 3-46; A) display the actual status and possible errors of the EPOS4 in respect to the NET network:

- Green LED shows the RUN state
- Red LED indicates errors

| LED | | Description |
|---|--------------|---|
| Green | Red | |
| OFF | — | EPOS4 is in state INIT |
| Blink | — | EPOS4 is in state PRE-OPERATIONAL |
| Single flash | — | EPOS4 is in state SAFE-OPERATIONAL |
| ON | — | EPOS4 is in state OPERATIONAL |
| Flicker | — | EPOS4 is in state BOOTSTRAP |
| — | OFF | EPOS4 is in operating condition |
| — | Double flash | An application watchdog timeout has occurred <i>Example: Timeout of Sync Manager Watchdog</i> |
| — | Single flash | EPOS4 has changed the COM state due to an internal error <i>Example: Change of state "Op" to "SafeOpError" due to Sync Error</i> |
| — | Blink | General Configuration Error <i>Example: State change commanded by master is not possible due to actual settings (register, object, hardware configuration)</i> |
| Blink = continuous blinking (≈2.5 Hz) Flash = flashing (≈0.2 s), followed by pause of 1 s Flicker = continuous flickering (≈10Hz) | | |

Table 3-73 NET Status LEDs

3.4.2 Device Status

The LEDs (→Figure 3-46; **B**) display the actual status and possible errors of the EPOS4:

- Green LED shows the status
- Red LED indicates errors

| LED | | Description |
|---|------------|---|
| Green | Red | |
| Slow | OFF | Power stage is disabled. The EPOS4 is in status... • “Switch ON Disabled” • “Ready to Switch ON” • “Switched ON” |
| ON | OFF | Power stage is enabled. The EPOS4 is in status... • “Operation Enable” • “Quick Stop Active” |
| OFF | ON | FAULT state. The EPOS4 is in status... • “Fault” |
| ON | ON | Power stage is enabled. The EPOS4 is in temporary status... • “Fault Reaction Active” |
| Flash | ON | No valid firmware or firmware download in progress |
| Flash = flashing (~0.9 s OFF/~0.1 s ON) Slow = slow blinking (~1 Hz) | | |

Table 3-74 Device Status LEDs

3.4.3 NET Port

The LED (→Figure 3-46; **C**) displays the link activity of the NET port (applies for both ports, X14 “IN” and X15 “OUT”):

- Green LED indicates link activity

| LED | | Description |
|--|--|------------------------------------|
| Green | | |
| OFF | | Port is closed |
| Flicker | | Port is open / activity is present |
| ON | | Port is open |
| — | | Data rate is 100 Mbit/s |
| Flicker = continuous flickering (~10 Hz) | | |

Table 3-75 NET Port LED

4 WIRING

In this section you will find the wiring information for the setup you are using. You can either use the consolidated wiring diagram (→Figure 4-48) featuring the full scope of interconnectivity and pin assignment. Or you may wish to use the connection overviews for either DC motor or EC (BLDC) motor that will assist you in determining the wiring for your particular motor type and the appropriate feedback signals.

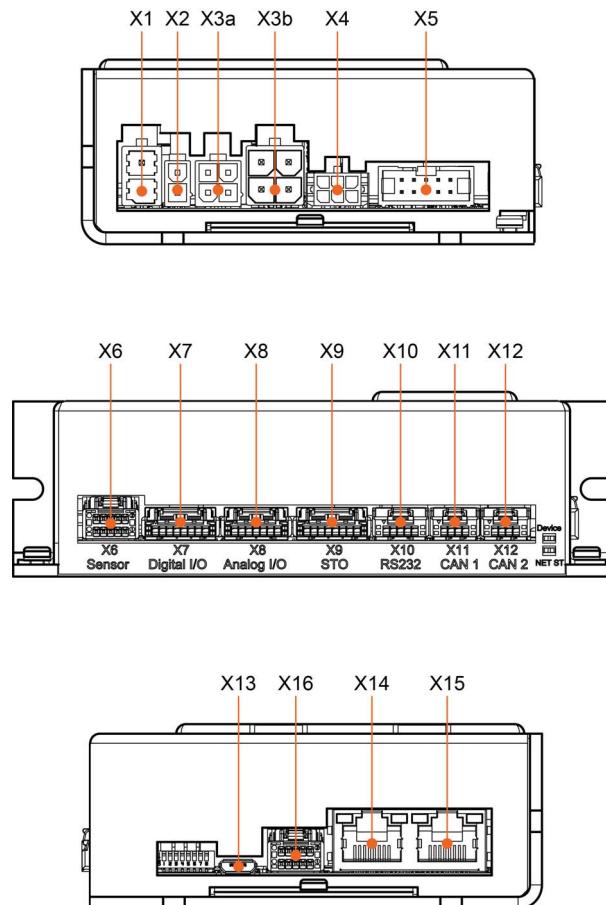

Figure 4-47 Interfaces – Designations and location

Signs and abbreviations used

The subsequent diagrams feature these signs and abbreviations:

- «EC Motor» stands for brushless EC motor (BLDC).
-  Ground safety earth connection (optional).

4.1 Possible Combinations to connect a Motor

The following tables show feasible ways on how to connect the motor with its respective feedback signals or possible combinations thereof. To find the wiring that best suits your setup, proceed as follows:

- 1) Decide on the type of motor you are using; either DC or EC (BLDC) motor.
- 2) Connect the power supply and the logic supply by following the link to the stated figure.
- 3) Check-out the listing for the combination that best suits your setup. Pick the wiring method # and go to the respective table; for DC motor →Table 4-76, for EC (BLDC) motor →Table 4-77.
- 4) Pick the row with the corresponding wiring method # and follow the link (or links) to the stated figure(s) to find the relevant wiring information.
