## Important Information

The functionality of an ESCON2 device is determined by its internal operating system (the so-called firmware). The firmware itself is subject to continuous development as part of an ongoing improvement process and is therefore being updated on a regular basis.

- ESCON2 devices are shipped with the latest firmware version available.
- New versions may feature additional or enhanced functionality as well as improved safety-relevant functions, which might not be fully compatible with former versions!
- You can update your device with the latest available version of firmware and «Motion Studio» (maxon's graphical user interface for ESCON2 servo controllers). You may access the downloads at <http://escon.maxongroup.com>.

#### Note:

*Before downloading a new version, you must check for its compatibility with the hardware version you are currently using! Consult maxon if you are in doubt.*

- Earlier versions are available on request.
- The currently used versions of both firmware and hardware can be read out from the controller using the «Motion Studio».
- To install a new firmware version, use the «Download Firmware» function in «Motion Studio».
- Be aware that you alone are responsible for using the appropriate firmware version in your present device. Consult maxon if you are in doubt.

#### Note:

*maxon or its representatives do not take responsibility nor obligation for any defect (such as, but not concluding; malfunction of the device and/or attached equipment, loss of production, etc.) caused by incompatibility of firmware versions and/or by mismatch of a particular firmware version with a given hardware version!*
